Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>
	10/616,444	SANNAPA REDDY ET AL.
	<b>Examiner</b>	<b>Art Unit</b>
	Eric C. Wai	2195

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 23 July 2007.
- 2a) This action is FINAL.                    2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-51 is/are pending in the application.
  - 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 1-51 is/are rejected.
- 7) Claim(s) \_\_\_\_\_ is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 09 July 2003 is/are: a) accepted or b) objected to by the Examiner.
 

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
  - a) All    b) Some \* c) None of:
    1. Certified copies of the priority documents have been received.
    2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
    3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION**

1. Claims 1-51 are presented for examination.

***Claim Rejections - 35 USC § 101***

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claim 51 is rejected under 35 U.S.C. 101 because the claimed invention is

directed to non-statutory subject matter.

4. Claim 51 is rejected under 35 U.S.C. 101 because the claimed invention is

directed to non-statutory subject matter. The claims are directed to a signal directly or

indirectly by claiming a medium and the Specification recites evidence where the

computer readable medium is defined as transmission media or signals. In that event,

the claims are directed to a form of energy which at present the office feels does not fall

into a category of invention. The following link on the World Wide Web is for the United

States Patent And Trademark Office (USPTO) policy on 35 U.S.C. §101.

<[http://www.uspto.gov/web/offices/pac/dapp/ropa/preognotice/guidelines101\\_20051026.pdf](http://www.uspto.gov/web/offices/pac/dapp/ropa/preognotice/guidelines101_20051026.pdf)>

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-51 are rejected under 35 U.S.C. 102(e) as being anticipated by

Kalyanavarathan et al. (US Pat No. 7,185,096 hereinafter Kalyanavarathan).

7. Kalyanavarathan was disclosed on IDS dated 04/20/05.

8. Regarding claim 1, Kalyanavarathan teaches a method, comprising:

a load balancer receiving a request (Fig 2 step 200);

the load balancer selecting a node to handle the request from among a plurality of nodes associated with the load balancer and not known by the load balancer to be inactive (Fig 2 step 202);

prior to sending the request to the selected node, the load balancer determining if the selected node is able to service the request (Fig 2 step 210);

in response to determining that the selected node is unable to service the request, the load balancer selecting another node to handle the request from among the plurality of nodes associated with the load balancer and not known by the load balancer to be inactive (Fig 2 steps 212 and 214).

9. Regarding claim 2, Kalyanavarathan teaches the load balancer is one load balancer among a plurality of load balancers in a load balancer hierarchy (col 1 lines 37-39).

10. Regarding claim 3, Kalyanavarathan teaches the plurality of nodes associated with the load balancer are load balancers in a lower-level of the load balancer hierarchy (col 1 lines 37-39, wherein it is inherent that the individual nodes that receive the workloads are in a lower level).

11. Regarding claim 4, Kalyanavarathan teaches the load balancer is associated with a higher-level load balancer in the load balancer hierarchy, and wherein said receiving a request comprises receiving the request from the higher-level load balancer (col 1 lines 37-39, wherein it is inherent that in a hierarchy of load balancers, the request would pass thru higher levels first).

12. Regarding claim 5, Kalyanavarathan teaches that if the selected node is determined to be unable to service the request and if no other nodes from among the plurality of nodes associated with the load balancer are not known by the load balancer to be inactive, the load balancer sending a message to the higher-level load balancer to disable the load balancer from receiving further requests (col 5 lines 56-57 and 60-62).

Art Unit: 2195

13. Regarding claim 6, Kalyanavarathan teaches that receiving said message, the higher-level load balancer marking the load balancer as inactive (col 6 lines 8-16).

14. Regarding claim 7, Kalyanavarathan teaches that upon receiving said message, the higher-level load balancer re-load-balancing requests pending with the load balancer among other load balancers associated with the higher-level load balancer (col 5 lines 63-67).

15. Regarding claim 8, Kalyanavarathan teaches determining if the selected node is able to service the request comprises the load balancer actively probing the plurality of nodes associated with the load balancer (col 4 lines 11-14).

16. Regarding claim 9, Kalyanavarathan teaches the load balancer periodically performing said actively probing (col 4 lines 11-14).

17. Regarding claim 10, Kalyanavarathan teaches if one of the plurality of nodes associated with the load balancer does not respond to said active probing within a timeout period, the load balancer marking that node as inactive (col 4 lines 15-20).

18. Regarding claim 11, Kalyanavarathan teaches the load balancer marking that node as inactive comprises re-load-balancing requests pending with that node among

the plurality of nodes associated with the load balancer and not known by the load balancer to be inactive (col 4 lines 31-34).

19. Regarding claim 12, Kalyanavarathan teaches that the load balancer marking that node as inactive comprises, if no other nodes from among the plurality of nodes associated with the load balancer are not known by the load balancer to be inactive, the load balancer sending a message to the higher-level load balancer to disable the load balancer from receiving further requests (col 6 lines 8-16).

20. Regarding claim 13, Kalyanavarathan teaches the load balancer sending the request to the selected node; wherein said determining if the selected node is able to service the request comprises the load balancer determining if the selected node fails to respond to the request within a timeout period (col 4 lines 15-20).

21. Regarding claim 14, Kalyanavarathan teaches that if the selected node fails to respond to the request within the timeout period, the load balancer marking the selected node as inactive (col 4 lines 18-20).

22. Regarding claim 15, Kalyanavarathan teaches the load balancer marking the selected node as inactive comprises, if no other nodes from among the plurality of nodes associated with the load balancer are not known by the load balancer to be

Art Unit: 2195

inactive, the load balancer sending a message to the higher-level load balancer to disable the load balancer from receiving further requests (col 6 lines 8-16).

23. Regarding claim 16, Kalyanavarathan teaches the load balancer marking the selected node as inactive comprises re-load-balancing requests pending with the selected node among the plurality of nodes associated with the load balancer and not known by the load balancer to be inactive (col 4 lines 31-34).

24. Regarding claim 17, Kalyanavarathan teaches after said selecting the node, the load balancer sending a dummy request to the selected node; wherein said determining if the selected node is able to service the request comprises the load balancer determining if the selected node fails to respond to the dummy request within a timeout period (col 4 lines 15-22).

25. Regarding claim 18, Kalyanavarathan teaches that if the selected node fails to respond to the dummy request within the timeout period, the load balancer marking the selected node as inactive (col 4 lines 17-20).

26. Regarding claim 19, Kalyanavarathan teaches the load balancer marking the selected node as inactive comprises, if no other nodes from among the plurality of nodes associated with the load balancer are not known by the load balancer to be

inactive, the load balancer sending a message to the higher-level load balancer to disable the load balancer from receiving further requests (col 6 lines 8-16).

27. Regarding claim 20, Kalyanavarathan teaches the load balancer marking the selected node as inactive comprises re-load-balancing requests pending with the selected node among the plurality of nodes associated with the load balancer and not known by the load balancer to be inactive (col 4 lines 31-34).

28. Regarding claim 21, Kalyanavarathan teaches that if the selected node responds to the dummy request within the timeout period, the load balancer sending the request to the selected node (col 4 lines 23-25).

29. Regarding claim 22, Kalyanavarathan teaches wherein said determining if the selected node is able to service the request further comprises the load balancer determining if the selected node fails to respond to the request within a timeout period (col 4 lines 15-20).

30. Regarding claim 23, Kalyanavarathan teaches that determining if the selected node is able to service the request comprises the load balancer receiving a message from the selected node indicating that the selected node is disabled (col 5 lines 56-57 and 60-62).

Art Unit: 2195

31. Regarding claim 24, Kalyanavarathan teaches that upon receiving said message, the load balancer marking the selected node as inactive (col 6 lines 8-16).

32. Regarding claim 25, Kalyanavarathan teaches upon receiving said message, the load balancer re-load-balancing requests pending with the selected node among the plurality of nodes associated with the load balancer and not known by the load balancer to be inactive (col 6 lines 17-22).

33. Regarding claims 26-50, they are the system claims of claims 1-25 above.

Therefore, they are rejected for the same reasons as claims 1-25 above.

34. Regarding claim 51, it is the computer access medium claim of claim 1 above.

Therefore, it is rejected for the same reasons as claim 1 above.

#### ***Response to Arguments***

35. Applicant's arguments filed 7/23/2007 have been fully considered but they are not persuasive.

36. Applicant asserts that Kalyanavarathan teaches a load balancer that relays an initial request to a selected node without any determination as to whether or not the node is active.

37. Examiner agrees that Kalyanavarathan's invention first sends a request to the nodes without checking whether or not the node is active. However, the initial step is necessary for Kalyanavarathan's invention to determine which nodes are active. Furthermore, before the initial request is sent, Kalyanavarathan's load balancer assumes that all nodes are active. Only when a node is unresponsive is that node marked as being unavailable. Kalyanavarathan's invention clearly would route subsequent requests to nodes that are known to be active by avoiding unavailable nodes (col 4 lines 19-20).

### ***Conclusion***

38. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
